Dr Ian BATTEN

Submitted in conformity with the requirements
for the degree of Bsc Computer Science
School of Computer Science
University of Birmingham

VPN over HTTP

Daniel Jones

March 27, 2018

Abstract

Problem: VPN traffic is easy to block, and commonly blocked on free public networks.

Solution: HTTP traffic is rarely blocked, so encoding data into HTTP traffic is one possible way to bypass filtering and blocking on public networks.

Conclusion: It is possible to encode data in such a way that it is difficult to detect that this has been done.

All code that was developed can be found at:

<https://git-teaching.cs.bham.ac.uk/mod-ug-proj-2017/dgj470>

Keywords: VPN, HTTP, Tunnelling, Obfuscation, Steganography

Acknowledgements

I would like to thank my supervisor, Dr Ian Batten for support and guidance throughout the project.

Additionally, I'd like to thank my housemates, friends and family for support throughout both this project and my degree as a whole.
